

Simple. Smart. Powerful.

Award winning AirAllow is an easy-to-use and affordable commercial access solution that can be managed from anywhere.

The AirAllow Virtual Keypad System (VKS) is a convenient, intuitive, and familiar PIN-keypad access control solution.

Features

- **Entry via PIN on your phone:** users enter a PIN on the phone's keypad to gain access.
- **Automatically unlock a door according to a schedule:** customize the schedules to meet your unique needs. Two schedules are included with the VKS. Additional schedules are possible, offered in higher tier subscriptions.

- **Day-of-Week and Holidays:** configure automated schedules according to day-of-week with holiday considerations. No more worries about forgetting to change the schedule for holidays, it is automatic with AirAllow.
- **Future Proof:** without changing hardware, upgrade to a feature rich subscription as your access control needs grow.

Specifications

The VKS is a convenient, easy-to-use solution where basic access control is desired. Users simply key a valid PIN into their mobile phone's virtual keypad to unlock the door. PINs are managed locally via the AirAllow Enclave app. With higher-tier subscriptions, administering PINs can be performed from anywhere using the app or the AirAllow Admin Portal. Another feature of the VKS is the ability to schedule a door to automatically open according to your unique scheduling needs.

Virtual Keypad Unlock: Enter PIN/Passcode to unlock.

Unlimited Passcodes: the VKS supports an unlimited number of passcodes.

Passcode Management: with the VKS, administrators use the Enclave app to add and remove passcodes. Higher tier subscriptions provide the ability to manage passcodes from the Admin Web Portal or the Enclave App from anywhere.

Automated Scheduled Unlock: unlock a door according to a schedule.

Registered Users: the VKS system uses passcodes only, these passcodes are not associated with a user or tracked within the system. With a subscription upgrade, registered users and visitors are tracked and logged in the audit trail.

Factory Direct End-User Support: with the VKS system, the technical contact of the end-user has chat, email, and knowledge base support. Phone support is available in higher tier subscriptions.
